

## [Trails](#) [1]

The main purpose of the Kujawski-Pomorskie Centre for Ecological Education is to effectively educate children, young people and adults from the Kujawski-Pomorskie region about various aspects of ecology.

Our modern educational facilities and the location of the Centre amidst diverse natural habitats (woods, meadows, ponds and reeds) provide for the wonderful educational opportunities which our Centre can offer in the field of ecology.

The natural environment surrounding the premises of the Centre can be used for outdoor and field classes, which are particularly useful for ecology teaching. The Botanical Garden, the Polish Fauna Garden with its unique collection of Polish animals and the educational trails located nearby provide the perfect background for effective and exciting ecological education.
